

AMENDMENTS TO THE SPECIFICATION:

[0002] Exposure to Xrays and/or Ultraviolet (UV) light can produce damage to skin and body tissues. This damage can produce immediate, short term or long term changes. These changes can be temporary or permanent. Benign skin changes can range from temporary irritation such as seen in radiation [[burns]] burns or ~~sun-burns~~ sunburns, or can be more delayed such as radiation dermatitis or chronic sun damage (poikiloderma).
